

We want a **luxurious, globally-inspired dashboard and landing page** with a clean, animated 3D look. A suitable AI prompt might be:

UI Design Prompt: “Design a **clean, luxurious web dashboard and landing page** with a global SaaS aesthetic. Take cues from minimalist interfaces like Notion, Stripe, and Apple. Use ample whitespace and a limited, neutral color palette with a strong primary accent. Employ premium sans-serif typography (e.g. San Francisco or Inter). Include both **light and dark mode**. Add smooth 3D animations or parallax effects on key elements and **subtle micro-interactions** (button hover effects, animated toggles) for an engaging feel. The dashboard should display data in elegant cards and charts; the landing page should highlight features with crisp imagery and concise text. Ensure the design is fully responsive and feels high-end, with polished Framer Motion–style transitions.”

This prompt emphasizes **clean design principles** – removing clutter, using whitespace strategically, and clear visual hierarchy. It also calls for premium details like micro-animations (inspired by Linear’s use of cursor-driven micro-interactions) and high-quality typography. Mentioning known styles (Notion’s minimalist use of illustrations, Stripe’s generous spacing, Apple’s product-driven layout) helps the AI builder mimic those polished interfaces.
